Accuracy, Rigidity, Repeatability: BHJ's CYLINDER HEAD FIXTURE

(Part# CHF-2)

**Mention This Flyer
And Take 10% Off The
Cylinder Head Fixture**

(Expires March 31, 2010)

BHJ's Cylinder Head Fixture ensures accurate positioning of any cylinder head from an established reference point. Cylinder heads are typically mounted from either the valve cover side, or the deck side, which leaves the other three surfaces exposed for machining operations.

The simple, repeatable setup procedure ensures that the travel of the cutter head is always parallel to the dowel pin centerline and all surfaces as the head is rolled over in the Fixture. Use of the large Protractor and adjustable Vernier Pointer allows this angle to be held within twelve minutes of one degree.

The Fixture utilizes massive Cast Iron End Supports, which are keyed for accurate alignment and are machined to accommodate the T-slot spacing of all common surfacing and milling machines. The infinite pivot point provides 360-degree rollover capability and accepts 4 cylinder, V-6 and V-8 heads up to 23-1/2" in length. Straight-6, V-10 and V-12 heads can be accommodated with the addition of the "XL" Step-Up Kit.
