NEW: Faster O-Ring Groove Setup With The ORG-3 Cutter Upgrade For ORG-1 & ORG-2 (Part# ORG-3-UPGD)

**Special Intro Offer:
Free Insert with Upgrade
For ORG-1 & 2 Owners!**

.039, .048, .060, .085 & .120 Insert Sizes,
Limit One Per Upgrade, Offer Extended to March 31, 2010

This is the most significant ORG design revision to-date, cutting setup time by more than half! Groove diameter setting is now done in the redesigned, adjustable tool block (see photos), thus making diameter adjustment independent of the Register Plate being used.

For current ORG-1 & ORG-2 owners, that means no more dial indicator in the end of the register plate every time you change groove diameter, or engine application! A Registration Pin (shown right) now establishes a 4.00" starting point and groove diameter is easily set as a plus or minus from that starting point. Works with your existing cutter head and all register plate applications, big bore and small bore alike.

This affordable upgrade (\$302.⁰⁰) is a must for ORG-1 & 2 owners who use multiple register plates, or cut various groove diameters. The upgrade was tested by a select group of ORG-1 & 2 owners, with rave reviews! The ORG-3 Upgrade Kit includes all parts and instructions needed to upgrade an existing ORG-1 or ORG-2 cutter head.

Additional information and Instruction Sheets are on the website to preview the newly streamlined process at: www.BHJProducts.com
